MONTESA BRIDGE. ALMANZA, VALENCIA, AND TARRAGONA RAILWAY, SPAIN. A view of this bridge is given at Plate 16. It consists of two spans, supported by a middle pier, composed of cast iron columns with wrought iron bracing. The railway is carried on the top of the girders by a platform of cross-girders of H section. The girders are of the lattice description, the diagonals being all flat bars of varied thickness, and the vertical stiffeners of tee section. Strictly speaking, no plates are used in the structure, and in other respects the design is very favourable to economy in construction. The whole of the ironwork, including the pier, was prepared and despatched from the Skerne Works in about five weeks from date of order. BRIDGE OVER THE RIVER AIRE. The whole of the wrought-iron bridges on the York and Doncaster section of the North-Eastern Railway were constructed at the Skerne Works. The designs and specifications were by Mr. T. E. Harrison, C. E., the companys engineer; and the works were carried out under the personal supervision of the late Mr. R. Hodgson, C. E. The Aire Bridge consists of two unequal spans, supported in the middle of the river by a pier, consisting of two cylinders of cast iron, filled with Portland cement concrete up to the splay length, i. e. to about water-mark. Above the splay length the cylinders are filled with brickwork in...
