## COMPARATIVE PROTOZOLOGY

Book Condition: New. Publisher/Verlag: Springer, Berlin | Ecology, Physiology, Life History | The protozoa are an eclectic assemblage of organisms encompassing a wide range of single-celled and multiple-celled colonial organisms lacking tissue organization, but exhibiting remarkably refined biological behavior. In some modern classifications, they are classified as a subkingdom among the Protista (eukaryotic single-celled organisms). Although they are not considered a formal category by some taxonomists and some biologists consider the name inappropriate (inferring that they are the first unicellular animals, although some photosynthetic), it is still convenient to consider this group of organisms as an informal collection under the heading of protozoa. Their cosmopolitan distribution, significant ecological role in mineral recycling and enhancement of carbon flow through lower trophic levels of food webs, and remarkable cellular adaptations to enhance survival in diverse environments make them significant organisms for biological investigation. In some cases, biologists are introduced to this group in first level courses or in invertebrate zoology, but never develop a full appreciation for the diverse and biologically sophisticated characteristics of these organisms. This book is intended as a survey of broad concepts in protozoan biology with an emphasis on comparative data. The focus is on the zoological aspects of the group. Topics more closely related to plantlike characteristics, as presented in books on phycology, are not considered in detail here. A sound background in modern biology and an introduction to cellular biology will be helpful in understanding Chapters 15 and 16, which include a substantial amount of information on biochemistry. | Section I Morphology and Ecology.- 1 The Protozoa in Broad Perspective.- 2 The Flagellates (Phylum: Sarcomastigophora; Subphylum: Mastigophora).- 3 Some Perspectives on the Habitats and Comparative Ecology of Flagellates.- 4 Amoebae and Their Relatives (Phylum: Sarcomastigophora; Subphylum: Sarcodina).- 5 Some Comparative...
